

Thomas Edison invented many devices that had a tremendous impact on life in the world as a whole, and among those inventions (the phonograph, the motion picture camera, the practical long-lasting light bulb), and therefore he was called the "Wizard of Menlo Park", and he was one of the first Inventors who applied the principles of mass production and teamwork greatly in their invention processes, which is why he is often credited with creating the first research laboratory industry. Thomas Edison obtained a patent record, and this was the force that prompted him to invent more such as the incandescent lamp, which was one of Thomas Edison's greatest inventions above, and Edison was the one who established the first industrial research laboratory in the world, which is known as "The Wizard of Menlo Park" in New Jersey City.
