

Finally, it can be said that technological innovation has a major pivotal role in the process of diversifying the Saudi economy. With the continuation of all the efforts made by the Kingdom of Saudi Arabia in following up on the goals of its vision 30 20, interest in the innovation process will remain an essential part of increasing the transformation of the Saudi economy, enhancing productivity, creating new opportunities for future generations, and interest in the process of accessing innovation well and increasing the knowledge-based economy. All of this helps the Kingdom of Saudi Arabia on how to reach reducing dependence on the use of oil revenues primarily and also the possibility of using other fields and creating an economy that is characterized by being more sustainable. The Kingdom has also adopted gradual, insular innovation, all in order to maintain its competitive capabilities in the global market in a rapid and advanced manner. The use of technological capture gives continuous progress in various sectors such as the oil and natural gas sector, renewable energy, and also in the field of artificial intelligence and financial technology.
