

There are similarities and differences in the impact on academic achievement online and in the classroom. Among the similarities, for example, in both types of study, the curriculum and academic content are presented to students, providing an effective educational experience that contributes to the growth of students and the development of their skills, and let us take a look at the most prominent differences between the performance of students who study online and those who study Online. Communication with the teacher and peers can be less direct because it relies on text messages and online conversations. Unlike studying in traditional classrooms, the student is limited to a specific place and time to attend class as well as interact and communicate in online study. Evaluation in Online Study It can be difficult to accurately estimate a student's performance online. Unlike studying in a traditional classroom, students can interact directly with the teacher and classmates and ask questions in real time. By studying online, students can benefit from the flexibility of studying anywhere, anytime. Also, focus and attention when studying online, it is difficult to maintain focus in an environment full of distractions, such as at home. Unlike studying in traditional classrooms, the student is in an environment dedicated to learning, which helps him focus more. As for studying in traditional classrooms, the teacher can provide the assessment directly. In the classroom. Let's start with controlling the environment. They .have control over the environment and schedule
