

The bright colours of birds, the call of monkeys and the hum of insects are common sights and sounds in a tropical rainforest. Even the people who live on the slopes of Mount Bosavi have rarely visited this hidden rainforest. They discovered many colourful, tiny frogs, some unusual species of fish, rare bats and spiders, a kangaroo that looked like a small bear, and a giant rat that was as big as a cat. In 2009 CE, an international team of scientists visited Mount Bosavi and discovered an amazing 120 species of plants and animals. The loggers have already destroyed a lot of trees in the area, but they haven't reached the slopes of Mount Bosavi yet. Logging has already begun in the area.
