

Trouble of Cybercrime in Modern Society" According to the reports handed by experimenters and scientists on the negative goods of computer technology, it's egregious that invention has come with numerous negative social goods. Cybercrime refers to all crimes committed against another person or a group of people motivated by harming them emotionally, physically and economically(Rothman and Mossman 56). Cybercrimes are generally committed using ultramodern communication bias and networks similar as mobile phones, computers, the internet, emails, converse apartments, social spots, among others. All these crimes are committed through the use of a computer and a network. Cybercrime and affiliated cybercrime have come a social trouble in ultramodern societies, and in fact in some countries they've come a trouble to state security, health and fiscal systems. According to recent exploration by a group of experts from developed countries, some of the major cybercrimes and internet- related crimes that have come veritably common include online child grooming, child pornography, software cracking without the proprietor's authorization, intellectual property pirating among others. The grasp of computer technology has also contributed to cyberspace- related crimes similar as irruption of sequestration, loss of nonpublic information, fiscal theft, spying and othercross-border crimes. States have also contributed to cybercrime by sharing in practices similar as cyber warfare among others(Rothman and Mossman 97). From the below exemplifications, it's clear that, anyhow of the fact that the invention of computer technology has brought numerous benefits, it has also contributed .to numerous negative social goods that can not be mentioned
