

Outline the steps GANT took to address information security challenges: Access Controls: GANT likely implemented access controls to ensure that only authorized individuals can access sensitive information. This might involve authentication mechanisms (e.g., passwords or multi-factor authentication) and role-based access controls (RBAC) to limit access based on a person's role. Confidentiality, Integrity, and Availability (CIA): The policy would be designed to ensure that data remains confidential (only authorized individuals can access it), maintains its integrity (data is accurate and protected from unauthorized modifications), and is available (data is accessible when needed). Enforcement of the Policy: GANT would have implemented measures to enforce the policy, such as regular audits, monitoring systems, and disciplinary actions for policy violations
