

Natural law is a philosophical and ethical theory that posits the existence of universal moral principles inherent in human nature. Despite these criticisms, natural law continues to be a significant philosophical and ethical concept, shaping legal systems, human rights discourse, and moral reasoning.

**Universal Morality:** Natural law proponents argue that certain moral principles are universally valid and applicable to all people, regardless of cultural or societal differences. It serves as a reminder of the enduring human quest for justice, fairness, and the good life. Mother Nature herself follows many rules and laws which help in the sustainability of this world and the life which flourishes on it in abundance. Some critics argue that it is too subjective and open to interpretation, while others contend that it lacks a solid foundation and can be used to justify various moral and political positions.

Every living organism, from the tiny unicellular amoeba to the biggest animal the blue whale follows a set of laws to survive. Let us take the examples of honey bees.

**Reason and Conscience:** Natural law emphasizes the role of reason and conscience in discerning moral truths. Individuals are expected to use their reason to understand and apply these principles in their lives.

**Inherent Rights:** Natural law implies that individuals possess certain ???????.inherent rights, such as the right to life, liberty, and property
