

Abstract--Software is the core for computer-based applications became an essential part for critical control systems, health and human life guard systems, financial and banking systems, scientific and educational, entertainments and other systems. Professional organizations like ACM, IEEE, ABET and CSAC have established codes of ethics to help software engineering professionals to understand and manage their ethical responsibilities. The estimated 1.5 billion of Muslims with tens of thousands of software engineers should have an effective role in software development and life, which requires them to understand and implement ethics, specially the Islamic ethics in their work. It focuses mainly on adopting a new version of software engineering principle based on Islamic ethical values
