Linguistics is the scientific study of language. A linguist might aim to provide an accurate and complete description of a particular language, or focus on a particular aspect of a language, such as an area of grammar or pronunciation As well as being interested in language structure, linguists also study the way that language is used, and this can cover a very broad range of Subjects a language is central to so many areas of human activity. Phonology, on the other hand, is the idea of the sound systems and patterns within a 2/113
