

Spring had finally come : it was time for Grandma to start planting her garden .Chloe asked," Now we wait for the plants to grow, "Grandma replied.What makes the plants grow? They use these things to make food that helps them grow. Ganda continued. The process plants use to make food is called photosynthesis during photosynthesis, the energy from the sunlight helps plants and turn water and a part of the air called carbon dioxide into food. Chloe asked. When plants do not get sunlight, they cannot get enough energy to make food. You know what else? The energy from the sun also indirectly provides energy to animals and human "That's silly, Grandma."Chloe asked , " We'll start with some vegetables , " Grandma said , " Tomatoes , carrots , lettuce and cucumbers . I want my garden to be full of delicious foods to eat during the summer. Chloe helped her grandma dig holes for the seeds, place them in the ground and cover them with dirt. Then they watered the seeds and went back inside to clean up. "Now what happens?"Chloe asked," Well, a lot of factors help the plants grow, "Grandma said," But all plants need three main things: water, sunlight and air."When it is cloudy, the sun is still shining."They got out all of the seeds and garden tools and headed outside to Grandma's garden . \* Let's plant a plant, and get some of that energy."What happens if a plant does not get any sunlight?"Grandma replied.This year , she decided she was going to let Chloe help ."Grandma said."Chloe said
