

Patient presents with left eye irritation. Patient displayed no abnormality upon confrontation assessment, and displayed regulated and average peripheral vision. There are no indications of abnormalities in the optic disk, vesicles, or macula. Left eye displays signs of irritation such as redness, foreign bodies, and slight swelling. Upon slight palpation to the under eye area, patient displays signs of slight discomfort and rates her pain at a 6 out of 10. Upon examination using a snellen chart, patient can read line 4, (20/50) when covering the right eye, when covering the left eye, patient can read line 7, leaving her vision scaled at a 20/25. Cornea and lacrimal glands appear normal bilaterally. Corneas are observed to be clear and intact bilaterally. Patient was able to follow each of the 6 cardinal points, however the patient reported pain increase upon keeping the left eye open when attempting to perform the examination. Both pupils are equal round, reactive to light and accommodation. Eyelids, eyebrows, and lashes appear normal. Left eye conjunctiva and sclera appear inflamed when compared to the right. No foreign bodies were found when palpating the conjunctival sac. Patient displays consensual light reflex. Patient stated pain occurred after the gardening incident. The background fundus is red and appears normally bilaterally.
