

Cars are very important means of transport in our time, and divide into several sections, there are small private cars owned by people to go to work or move with the family, there are large buses used to transport passengers and trucks used to transport goods. The first modern car was invented by Karl Benz in Germany, it was powered by a gasoline engine, this was in the year one thousand and eight hundred and eighty-five, Karl Benz patented his patent on January 29, 1886, in Mannheim, Germany, . There are a number of cars made in the year 2000 AD with speed up to two hundred and ten kilometers per hour, And another with four hundred kilometers, but these species are experimental and can not be used normally, they are high-priced, heavy battery, they also need to charge for eight hours. And a car is one of the most important inventions because it helped him move between cities and countries and far away. There was also Coniot car; Coniot car is a steam car that was invented by Nicholas Coniot in 1804, One of the first cars in history, Coniot was a French army engineer, and invented it for the purpose of dragging heavy equipment for the army, especially the guns. The original car is located in the National Museum of Industry and Arts in Paris, France. The first electric car was invented in the year one thousand eight hundred and thirty-two, before the existence of internal combustion engines by seventy years. Its work ended when it hit the camp wall during its show.
