

Identifying Information: Subject M.A. is a female resident of Riyadh who is 53 years old. Linking is an auxiliary factor for remembering words. It is possible that the environment during the test was one of the auxiliary factors for it to be quiet and comfortable during the test to remember the words. Test Administered: The Rey Auditory Verbal Learning Test (RAVLT) is a neuropsychological assessment used to evaluate verbal memory in patients aged 16 and older. and the 15 Words Test assesses her capacity to verbally encode, mix, store, and retrieve information at various stages of short-term memory. Referral Source and Presenting Problem: Subject M.A. was approached in order to fulfill the partial requirement of course assignment. The client noted that she was also troubled by her youngest son's diabetes and exposure to a health issue, which caused her to worry and think about him a lot. M.A. was also selected because, according to the client, she occasionally forgets where she puts things or, to put it another way, she forgets when someone says an important thing to her. Interview Information: According to the client, she occasionally forgets where she put things or, to put it more succinctly, she forgets when someone says something important to her. She continued by saying that she adores baking in particular. The test is conducted five times, with the examiner reading aloud at a rate of one per second. The RAVLT scores are derived from raw RAVLT scores, including RAVLT Immediate, Learning, and Forgetting. Her scores on the trails were 9, 11, 12, 14, 15 respectively. This indicates its good ability at .(connecting and linking to words. Assessment was conducted at her place. Bean, J. (2011
