

The document, titled "Date Palm Value Chain Analysis and Marketing Opportunities for the Gulf Cooperation Council (GCC) Countries," provides an overview of the date palm sector in the GCC countries and discusses the challenges and opportunities in the date palm value chain. It emphasizes the need for sustainable production systems and improved marketing strategies for date palm products.

The document highlights the importance of date palm cultivation in the Arabian Peninsula and its significant contribution to the economy, employment, and trade in the region. It also mentions the efforts undertaken by the GCC countries to enhance date palm productivity and improve the quality of produce.

The study analyzes the value chain of date palm marketing, explores international market opportunities, and proposes strategies for the development of a more inclusive and value-added date palm sector. The

document includes information on date palm production, marketing systems, domestic consumption, livestock feeding use, and domestic market structure in the GCC countries. The document focuses on the analysis of the date palm value chain in the Gulf Cooperation Council (GCC) countries, specifically the Kingdom of Saudi Arabia (KSA), Oman, and Kuwait. It aims to identify the processes involved in

creating value within the date palm value chain and how these values are distributed among stakeholders. The study highlights several problems and constraints that currently exist in the date palm

sector in the GCC countries. These issues include low product quality, high field and post-harvest losses, and the need for improvement in the utilization of date products and by-products. To address

these challenges, the GCC countries have recognized the importance of date palm cultivation and have prioritized research and development efforts in this sector. The project "Development of sustainable date

palm production systems in the GCC countries of the Arabian Peninsula," funded by the GCC

Secretariat, was implemented to improve date palm productivity per unit of water and promote sustainable production practices. Oman has the highest per capita date consumption, followed by Saudi
