Immunochromatography assay (ICT),namely lateral flow test,is asimple device intended to detect the presence or absence of the target analyte. The concept of immune–chromatography is acombination of chromatography (separation of components of asample based on differences in their movement through asorbent) and immunochemical reaction .3. Substrate (Nitrocellulose) Membrane :It is highly critical in determining sensitivity of ICT. Test and control lines are drawn over this piece of membrane should .provide2
