

Post-pandemic aggregate planning has become vital for companies as they adapt to the complexities of recovery and growth. Additionally, companies are adopting **agile revenue recovery** strategies, exemplified by a Chinese car-rental firm that quickly segmented its customer base and tailored services, achieving a 90% recovery in business within weeks

[[2]](<https://www.imf.org/en/Blogs/Articles/2023/03/21/how-pandemic-accelerated-digital-transformation-in-advanced-economies>). Lastly, businesses are enhancing **customer engagement** strategies to align with evolving consumer expectations, leading to improved loyalty and satisfaction

[[2]](<https://www.imf.org/en/Blogs/Articles/2023/03/21/how-pandemic-accelerated-digital-transformation-in-advanced-economies>). There is also a trend towards **rethinking supply chain strategies** to enhance flexibility and resilience, with many organizations diversifying their supplier bases to mitigate risks associated with geopolitical uncertainties

[[1]](<https://www.mdpi.com/2071-1050/14/22/15275>). Organizations are increasingly focusing on **digital transformation and automation**, recognizing the strategic importance of their supply chains and investing in technologies that enhance efficiency and responsiveness. Furthermore, a strong emphasis on **sustainability** is evident, as companies adopt circular economy principles to minimize waste and meet growing consumer demand for sustainable practices
