

Sum and direct sum of Ideals In this section we discuss the concept of the sum of ideals (right ideals, left ideals) in a ring R . Definition... Let $\{R_i\}_{i \in I}$ be a family of rings, and let $R = R_1 \times R_2 \times \dots \times R_n$ be their direct product. Let $R_i \subseteq R$. Then $R = \sum R_i$ is a direct sum of ideals R_i , and $R_i \subseteq R$ as rings. On the other hand, if $R = \sum_{i=1}^n R_i$ is a direct sum of ideals of R , then $R \cong R_1 \times R_2 \times \dots \times R_n$, the direct product of the R_i 's considered as rings on their own right. Proof Clearly, $R \cong R_1 \times R_2 \times \dots \times R_n$. Let $x \in R$. Then $x = (x_1, x_2, \dots, x_n)$ where $x_i \in R_i$. This gives $x_i = 0$ and, hence, $x = 0$. Therefore, 198 Ideals and homomorphisms For the second part we note that if $x \in R$, then x can be uniquely expressed as $a_1 + a_2 + \dots + a_n$, $a_i \in R_i$, by Because and onto. Also, if $x, y \in R$, f is well defined. It is also clear that f is both 1-1 and onto. To show we need to note that if $a_1 + \dots + a_n = 0$, then $f(a_1 + \dots + a_n) = f(0) = 0$. This remark then immediately yields that $f(xy) = f(x)f(y)$. Hence, f is an isomorphism. The direct sum $R = \sum_{i=1}^n R_i$ is also called the (internal) direct sum of ideals R_i in R , (external) direct sum of the family of rings R_i , $i = 1, 2, \dots, n$. In the latter case the notation $R_1 \oplus R_2 \oplus \dots \oplus R_n$ is also frequently used. The context will make clear the sense in which the term "direct sum" is used. If A_1, A_2, \dots, A_n are right ideals in a ring R , then $S = \{a_1 + a_2 + \dots + a_n \mid a_i \in A_i, i = 1, 2, \dots, n\}$ is the sum of right ideals A_1, A_2, \dots, A_n . Proof It is clear that $\{a_1 + a_2 + \dots + a_n \mid a_i \in A_i, i = 1, 2, \dots, n\}$ is a right ideal in R . Also, if $a \in A_i$, then $a = a_1$ in S , and, hence, $A_i \subseteq S$. Similarly, each A_i , $i = 1, 2, \dots, n$, is contained in S . Further, if T is any right ideal in R containing each A_i , then obviously $T \supseteq S$. Thus, S is the intersection of all the right ideals in R containing each A_i . Let A_1, A_2, \dots, A_n be a family of right ideals in a ring R . If I is a minimal right ideal, then I is generated by any nonzero element of I . 3.2 Theorem. Let A_1, A_2, \dots, A_n be right (or left) ideals in a ring R .
