

pm, 19/04/2024] Israa Meslh: The husband and children make a new home without the alcoholic 6:38]

Stage 7: Recovery and reorganization of the entire family. Use the NJ process 1- Evaluation: By collecting personal and objective data about the person suffering from alcohol addiction. Personal data For nursing people who use or drink alcohol pattern Data and time of last drink – tremors, hallucinations, delusions or delirium tremens (DTs). Objective data: must be evaluated Abnormal response to preoperative medications, anesthesia or sedatives, or performance [6:39 pm, 19/04/2024] Israa Meslh: Mental, etc. Blood tests indicated A – Increased liver enzymes B – Hypoglycemia C – Low Mg²⁺ level etc. Urine testing is not used to detect alcohol because it is metabolized very quickly. Blood alcohol levels are more accurate: as an activity in carrying anxiety – denial, in fear. – Increase or decrease in fluids – Maintaining health – In urine – Infection, injury – Deficit in self-care. 3- Implementation: A- Primary prevention: Helping pts prevent alcohol and drug problems before they begin. The key to prevention is education. B- Secondary prevention: Rapid Dx & Rx guidance can be important in helping alcoholics [6:41 pm, 19/04/2024] Israa Meslh: abusers to once again become productive members of society: الأدوية More & more programs are developed to detect substance abusers. c- Tertiary prevention Medication – As Librium, an it convulsant etc. – Nutrition therapy Nursing: التي تخفف من تأثير الكحول في الدم. care Education about the disorders associated with alcohol abuse as: – Hepatic = Hepatitis, cirrhoses 1 = Ca of mouth and esophagus, Irritation of stomach or pancreas etc 2- GTI 3- Neurological = Brain disease, neuropathies disorder of peripheral nervous 4- Cardio vascular = CHF. Increase BP. Increase cholesterol level, decrease blood level etc- 5- Musculoskeletal = Disorder of muscles (myopathies) gout etc. 6- Immunological = Increase susceptibility to infection. 7- Skin = Abscesses, rashes 8- Psychological = Depression, anxiety etc 4- Evaluation: CHN needs to assess the entire family system, to ensure that all members are Moving to ward recovery
