For example, in Florida, the sprawling Miami–Dade County parks system was losing millions of dollars and more than 300 million gallons of water in its aging water infrastructure.With a solution that interfaces with sensors and intelligent meters, county employees can now remotely monitor water consumption and detect leaks via smart devices, laptops and office computers.As a result, the parks department estimates a 20 percent reduction in water use annually with a cost reduction of $860,000 per year.
