

PCC Group follows the European Pharmacopoeia's quality standards when producing pharmaceutical products' raw materials. PCC Group offers superior raw materials for the synthesis of APIs, such as phosphorus trichloride, phosphorus oxychloride, Ortho dichlorobenzene (ODCB), and Mono chlorobenzene (MCB). Consequently, it makes sense to work with raw material producers for pharmaceuticals, like PCC Group (Pyridinium chlorochromate), who implement production standards compliant with ISO (International Organization for Standardization) guidelines. In pharmaceutical applications, caustic soda and hydrochloric acid are used as reducing agents, catalysts in chemical reactions, and pH adjusters. These materials are made into capsules, tablets, ointments, creams, gels, and emulsions.
