

The global adoption of BIM cannot be left unnoticed, and while many regions are making BIM a mandatory practice, some are on the course of action. The practice of implementing applications of BIM has been increasing globally with non-profit agencies and government organisations diving into diverse BIM solutions and standards. The US is one of the first nations to adopt this technology within several public sector organisations like the US Army Corps of Engineers, the General Service Administration, etc. Many nations like the US, UK, China, Singapore, South Korea, France, etc. With the public sector playing a primary role in BIM adoption practices, the UK government is all set to acquire BIM Level 2 by 2016. Countries from Europe are also active users of BIM on a large scale. have started using BIM for projects in the public sector
