

Imagine a world without paper. Environmental Impact: The absence of paper would reduce deforestation, but it might lead to increased reliance on electronic devices, with their own environmental costs. Communication: Paper-based correspondence, like letters and postcards, would disappear, potentially affecting interpersonal relationships and communication styles. Economic Changes: Industries related to paper production, printing, and publishing would cease to exist, impacting jobs and economies. It would be a dramatically different place: Information Access: While digital information would exist, the physicality of books and documents would be missed.
