

Global warming is one of the most important issues related to the environment , driven by human activities, has emerged as a critical environmental issue with profound implications for both people and the planet .To stop it, we need to use cleaner energy sources like the sun and wind and protect forests that absorb carbon dioxide.In this essay I'll show you that understanding its drawbacks, effects on communities and potential solutions is essential for addressing this pressing challenge.Also, because of global warming, the ice at the North and South Poles is melting, which makes the oceans rise and could flood places where people live near the water.Their homes, called habitats, are changing too fast and they can't keep up. This means some animals might not have enough food to eat, and some plants might not grow where they used to. If we don't do something about global warming soon, it will keep getting worse and cause even more problems for everyone on Earth.Today, things like driving cars, factories and cutting down forests make global warming worse.It makes the weather go crazy, with bigger storms that can flood cities and damage homes.Not only that, but global warming is also making life hard for animals and plants.
