Another modern invention we owe to a happy accident is Post–it" Notes, those small pieces of notepaper that can be stuck and unstuck again and again. In 1970, Spencer Silver was working in a research laboratory, trying to create a strong adhesive. He created a new adhesive that stuck to objects, but it could also easily be lifted off them. Because the adhesive was so weak, Silver considered it a failure. He shouldn't have. A few years later, a co–worker of Silver's was looking in a book. He used scraps of paper to keep his place in the book, but the scraps kept falling out. Remembering Silver's invention, the co–worker put some of the adhesive on the scraps. It was perfect! The scraps stayed in place, but came off easily so they didn't damage the book. Post–it Notes were introduced in 1980, and quickly became an essential office product around the world. All of these stories show that accidents are not always a bad thing, and that not all mistakes should automatically be discarded. Instead, perhaps we should take a closer look at our accidents and mistakes. They just may reveal the solutions to a problem, or pave the way to an extraordinary new idea.
