

The study aimed to explore the opinions of first grade teachers about the impact of using active learning strategies in enhancing the quality of education and student interaction during classes. The study presented the importance of the research in enriching the educational literature on active learning strategies and their role in improving basic education. The hypotheses of the study, which predict positive effects of these strategies on student engagement and achievement of learning objectives, were also put forward. The study identified five main objectives: Improving student comprehension, encouraging critical thinking, and fostering a positive and interactive classroom environment. Then, the study questions were formulated, which included five main questions aimed at understanding the effects of active learning on the classroom environment, such as student interaction, motivation, and skill development.
