

5.2 Construction Process According to the number and standard of existing 2D drawings, technicians can create and develop according to the plan, while professionals can create a database to create 3D drawings.6.3 Help Enterprises Realize Cost Control Construction enterprises in the realization of civil engineering construction projects, the need to cooperate with a number of disciplines, thus requiring the collection and statistical analysis of information on a number of engineering aspects.BIM technology, as a stand-alone management software, allows for direct data modeling to incorporate color into the 3D building, thus providing a comprehensive analysis of the dialysis model and design.Adverse effects on the environment.
