This report presents the findings of our investigation into the disappearance of Flight 305. The main findings were (1) that the airplane hit a severe thunderstorm, (2) that it stalled, and (3) that the co-pilot knew about the problem with the speed but couldn't communicate the problem to the pilot in time . The report recommends that all pitot tubes be inspected and replaced regularly when necessary, and that the airline should train all flight crew on how to communicate better during emergencies.
