

Cyber security has become a matter of global interest and importance. The Whitehouse (2011) has outlined a cyber strategy that provides the stance of the United States of America (USA) on cyber-related issues and outlines a unified approach to the USA's engagement with other countries on cyber issues. Already more than 50 nations have officially published some form of strategy document outlining their official stance on cyberspace, cyber crime, and/or cyber security (Klimburg, 2012). In most literature, cyber security is used as an all-inclusive term.
