

I am excited to apply for a research internship at the Okinawa Institute of Science and Technology (OIST), where I aim to deepen my expertise in chemistry while contributing to ground breaking interdisciplinary research. At OIST, I hope to accomplish several goals: first, to enhance my technical skills in advanced analytical methods; second, to engage in collaborative projects that bridge chemistry with biology and materials science; and third, to contribute to the discovery of new compounds that could have significant implications for health and sustainability. After war in Sudan I had enrolled in programs associated with learning children affected by war and am worked as learning facilitators with Auttash Organization for Peace and Development in cooperation with the Ministry of Education and funded by unicief in Program called Safety learning spaces for pyschological supports and skills Development for sudans conflicts affected school aged children in northern.
