

Einstein is a German physicist. After Einstein's death, a study was conducted on his brain, and a report on this study was published in 1985 AD, in which it was stated that the number of glial cells of neurons in Einstein's brain exceeds the number in other brains on which the same examination was conducted, and this may cause an increase in the metabolism of neurons, which can be a reason for Einstein's superior mental abilities.[3] Einstein's life and studies Einstein lived with his family at the beginning of his life in Munich, and then moved with her to Italy, he mentioned that there were things that affected him at a young age and he considered them one of the wonders of life ; The first of these was the compass that he used to see when he was five years old. After obtaining additional courses, he was able to join the Swiss Federal School of Applied Arts, and in 1901 he obtained a diploma in mathematics and physics. Einstein's achievements Einstein is considered one of the most talented and innovative scientists. Brownian motion.
