

My difficulties rid of my problems at the beginning of the project, which was my inability to (communicate information to students in the appropriate way – my inability to use the Zoom program to communicate with students – manage a group of individuals of the same age and form a team). Some of them were organizing appointments and materials for the team, and some of them were helping me in explaining and communicating information to students with me. Secondly, I was unable to deal with zoom program and that did not make me able to communicate with the students but I deal with that problem by seeing a videos and learn the tips on zoom program that make me able to communicate with the students and explain to them how to deal with the program and how to make the scientific research. Firstly, I managed to solve it, and when I made a team, whose number did not exceed 5 individuals, I distributed the tasks to a team. But I overcame it quickly and simply, and it was that one of the students who we were explaining to them had a simple idea about the research work, but not in the same pattern that the Ministry of Education was asking for, but I contacted this student and explained to him our work system
