

Research–methodology provides various techniques that support researcher to apply research pro–environmental manners amongst undergraduate learners in Salalah. This research on pro–environmental behavior and undergraduate students from assessors will be done using a quantitative research framework. The benefit of the quantitative framework is that it is based on objective and verifiable data about the research topic and research subjects that are considered within the framework of the research. It means, the conclusions will be based on observed facts and broken connections between research objectives and the hypothesis that is being made about pro–environmental behavior. Another benefit to go with the quantitative framework is that the number of participants will be able to be increased which is important because this study is done on undergraduate students belonging to the Salalah and therefore quantitative study allows multiple participants to be selected from different segments and age groups. This study on pro–environmental behavior and undergraduate study is also done on the descriptive framework because the specific determinants are applicable only to the case of undergraduate students from Salalah is being explored and therefore it is done within the provided framework of analysis. design, sampling and collect data. Research–methodology facilitates to investigate factors affecting
