

Improvements to airport websites can include various aspects related to user experience, accessibility, and information delivery, such as:

1. Comprehensive service guides include lounges, parking, car rentals, and nearby hotels.
- Integrate with other applications:
 - o Link the website to map applications such as Google Maps to guide passengers at the airport.
- Improve user experience:
 - o Add a night mode to provide visual comfort for users.
- Provide accurate and direct information:
 - o Instant updates on flight status, including delays, cancellations, and boarding gates.
 - o Notifications on flight status via email or SMS.
- Improving the transportation experience:
 - o Direct taxi booking service from the website.
- Improve passenger services:
 - o Live chat support to quickly respond to passenger inquiries.
 - o Ability to link to airline applications to learn about check-in procedures and available services.
 - o Adding electronic payment options (Apple Pay) to book services directly through the website.
 - o Local weather information and popular tourist destinations to help you plan your trip.
