

think in probabilities bridge is a card game in which the most successful players are able to judge mathematical probabilities to beat their opponents. He adds that by focusing on the economic aspect of the equation and not the stock price, an investor will be more accurate in his or her ability to judge probability. For example an investor that ponders the probability that a company will report a certain earning growth rate over five or ten year period is much more apt to ride out short-term fluctuations in the share price .
