

Stages of visual development in young children

- 1.3 Exploration phase (4–6 months): By the age of 4 to 6 months, babies have access to objects and have a better perception of seeing more colors

Hearing is the first sense that already develops in the prenatal period, starting from the first trimester of pregnancy.

Neonatal stage (from birth – two months) Newborn babies can see objects around 20 to 30 centimeters

- 2 Early childhood (2–4 months) The child begins to follow moving objects and shows interest in colorful games and pictures.

- 1 At the age of about three months, babies begin to interact with your facial expressions and voice.
