

****JOBS IN THE FUTURE**** In the next 20 to 30 years, jobs will change greatly because of advanced technology, globalisation, and environmental challenges. In addition, environmental careers such as renewable energy engineers and sustainability consultants will become more important as countries try to reduce pollution and protect the planet. For example, there will be high demand for software developers, cybersecurity specialists, data analysts, and robotics engineers. Technology such as artificial intelligence, robotics, and digital communication will strongly influence the labour market. Virtual meetings and online collaboration tools will replace traditional offices in some industries. Workers will also need problem-solving skills, creativity, teamwork, and the ability to learn continuously. Many companies will use advanced technology and automated systems to improve productivity. Therefore, communication skills and digital literacy will be essential. Technology and global changes will create new opportunities but also new challenges.
