

we note a drop compared to the former time, indicating an enhancement in asset quality. The bank now maintains a advanced rate of liquidity to its deposits, adding fiscal stability. This rate is within the internationally accepted safe range(generally between 70 and 80). It means that the bank is advancing a significant portion of its deposits, which may indicate advanced threat. In the event of any fiscal heads or a mass pullout of deposits, the bank may face difficulty meeting demand due to limited available liquidity. On the positive side, this also reflects that the bank is laboriously advancing, which could mean advanced tip yields. It may indicate the bank's tendency to reduce threat or a growth in deposits at a advanced rate than loans.
