

Product Information Technical Information The 3M(TM) Perfect-It(TM) Headlight Lens Restoration Kit is a full system of products assembled specifically for removing dullness and haze from plastic automotive lenses. The kit contains sanding and polishing tools, 3" Trizact(TM) abrasive discs, and Perfect-It(TM) rubbing compound and polish. Restore Clarity to Plastic Lenses in 15 Minutes or Less Incorporating two premium 3M brands, our 3M(TM) Perfect-It(TM) Headlight Lens Restoration Kit contains a complete system of tools, light abrasives, compound and polish to restore clarity and remove dullness and haze from headlight and other plastic vehicle lenses. Instead of replacing the lenses, collision repair professionals can refine and eliminate tiny scratches and surface imperfections which cause haze, yellowing and cloudiness, in 15 minutes or less. The kit uses a simple process involving lightly sanding and polishing the lenses with a series of 3M(TM) Trizact(TM) abrasive discs from P800 – P3000, along with 3M(TM) Perfect-It(TM) EX Rubbing Compound and 3M(TM) Perfect-It(TM) EX Machine Polish. All of the discs feature our Hookit(TM) hook-and-loop attachment, which works with the included Hookit(TM) soft interface pad for fast, efficient change-outs without additional tools. The included handheld sanding and polishing tools accommodate all 3" discs and pads for precise sanding and polishing in smaller areas. Instead of replacing lenses, you can simply remove surface imperfections to restore clarity in 15 minutes or less.
