

Coronaviruses are named for their spikes, which look similar to a crown or the sun's corona, that are named for their spikes, which they can infect both animals, and people, and can cause of their membranspiratory system. The novel corona virus has given rise to a global pandemic that has destabilized most institutional settings. While we live in times when humankind possesses the most advanced science and technology, a virus invisible to the naked eye has massively disrupted our lives, economies, healthcare, and education systems worldwide. Chinese researchers identified a new coronavirus as coughing behind the mysterious illness that sickened many people in Wuhan. Given the corona virus's current situation, some households have also had time to introspect on gender roles and stereotypes. Most respiratory viruses are transmitted through coughing and sneezing. Bats are considered a possible source, because they have evolved to coexist with many viruses, including coronaviruses. Failure to take precautions against the virus can lead to an exponential increase in the infection and deaths rates.
