

The most important thing that the course included was some general information about the Java language, its history, and the concept of Java. The assignment was interesting and enjoyable as a modern way to develop my skills in this subject as it increased my knowledge of using Java data in programming. The course also included the data types used in Java and an explanation of the methods of multitasking in Java and how to create a topic. The fun thing about this course is that each presentation is accompanied by some pictures and graphics that increase my understanding. This course contains a lot of information about Java programming in a simple, fast, and clear way.
