

Electric cars might have some advantages because their heavy batteries make them more stable on the road (Consumer Reports, 2022). Ultimately, the choice between electric cars and petrol cars depends on a variety of factors, including environmental priorities, technological advancements, and regulatory frameworks, with both options requiring ongoing efforts to achieve sustainable mobility solutions. Additionally, electric cars often incorporate advanced driver assistance systems (ADAS) and autonomous driving technologies, such as Tesla's Autopilot, which can improve collision avoidance and reduce the likelihood of accidents caused by human error (Tesla, 2022).
