

As time goes by, and as modern technology continues to evolve and develop, teachers and learners need to change as well to stay relevant. There are also educational videos and other online learning resources that can elicit active participation among learners. Learning, today, emphasizes on critical thinking, collaborating, communication and practical skills which can be achieved by technologically enhanced education system and exposure to the real world of learning. It focuses not only in increasing knowledge retention but also in converting these into actual skills essential to survive and eventually succeed. It provides learners with endless opportunities to develop holistically. Teachers have learned to adapt to a technology-based mode of teaching and use advanced forms of learning which help them in facilitating lessons and in promoting student engagement. While many of us bow down to the indisputable benefits of technology, there are also many technophobes who visualize it as a threat to the current education system and to learners as well. As modernity continues, technology dramatically advances and everyone tries to stay in line to survive. Students learn more when their interest is stimulated and when they are involved in various activities in the classroom. Teachers use virtual activities that learners get to enjoy.
