

Dentists are often the first health care professionals to recognize and identify a wide variety of diseases, ranging from hypertension to oral cancer. Geriatric (elderly; old) dental care and the greatly increased demand for newer services, such as implant cosmetic dentistry, will also contribute to this growth of the profession. In the modern era of health care, dentists utilize new and advanced technology such as computers, digital radiography, Cone Beam Computed Tomography and Magnetic Resonance Imaging in diagnosing patients. Dentistry provides Dr Ahmed A. Edries 4 opportunities in a variety of private and public settings including private practice, teaching, research, public health and administration. They diagnose and treat problems affecting the teeth, gingival tissue, tongue, lips and jaws. Dentistry offers minority students exceptional career opportunities. These oral diseases often reveal other health issues that may require a follow-up with the patient's primary physician. The need for dentists from minority groups is very strong. Dentistry allows you to be your own boss.
