

iology: is the science of life in all its living forms, plants, animals, and microorganisms including humans
Biology: is the scientific study of life The term: "biology" is derived from bios = life and logos = science for
living organisms: have many features that distinguish them from non-living things – A tiger is an
excellent example of an organism that adapts to its environment – it lives due to adaptation to its
environment Organization: is another important attribute of living organisms that define the themes in the
