

UAE, also known as the United Arab Emirates, is a country rich in culture and tradition. In conclusion, UAE weddings have evolved significantly over time, reflecting the changing values, preferences, and socio-cultural dynamics of the society. One of the essential components of a UAE wedding is the traditional Emirati dress called "jalabiya" for men and "abaya" for women. In the past, the bride and groom would wear traditional clothing adorned with intricate designs and gold accents. Nowadays, while traditional clothing remains a crucial aspect, people are more inclined towards incorporating elements of Western fashion into their wedding outfits. Brides may opt for designer bridal gowns, while grooms may choose suits or a fusion of traditional and modern attire. The wedding venues have also undergone significant changes over the years. In the past, weddings were commonly held in the homes of the bride or groom, utilizing open spaces or communal areas. Presently, there is a trend towards organizing weddings in grand hotels, luxurious ballrooms, or purpose-built venues. This change signifies the desire to celebrate weddings on a grander scale and provide a unique experience for the couple and their guests. Furthermore, traditional Emirati customs and rituals still hold great importance in present-day weddings. These include the "henna" ceremony, where intricate patterns are drawn on the hands and feet of the bride, and the "sahab" ceremony, which involves the bride's family giving gifts to the groom's family. The shift from arranged marriages to more individual choices, the grandeur of the celebrations, the incorporation of modern elements into traditional customs, and the transformation of wedding venues all highlight the fusion of the past and present in UAE weddings. Weddings in the past and present have witnessed significant changes, reflecting the evolution of society and the fusion of modernity with traditional values. However, as time progressed, UAE society underwent significant transformations, and weddings began to reflect these changes.
