

When we think of flying animals, the first thing that comes to our mind is birds. Bats and insects like butterflies are two of them. Bats are the only mammals that can truly fly. Butterflies look different from many other flying animals, compared to birds and bats, butterflies have really big wings for the size of their bodies. In conclusion it is amazing how both bats and butterflies fly, yet it is in a different way with different wings. However, there are other animals that flies, too.
