

The Azaiba development project in Muscat could comprehensively include many elements aimed at improving the quality of life for residents and visitors. Electrical voltage: – Improving police and emergency services and ensuring the safety of residents. She suggested some proposals that could be developed in the Al-Athaibah neighborhood: Infrastructure: Improving and widening roads to reduce traffic congestion. The comprehensive development of Al-Athaibah will contribute to creating its own model in the Internet area of nerve fibers and services, making it attractive to everyone, investors and visitors alike. Strengthening the electricity and water network to ensure continuity of service without interruption. Creating parks and green spaces in all recreational areas. Public transport: Developing the public transportation network, including taxi services, to improve areas within the region. Encouraging energy use in public languages.
