

Results – Projected Outcomes "We anticipate a significant improvement in operational metrics. The average session start delay is projected to decrease from 15 minutes to 5 minutes, marking a 66.67% improvement. Additionally, equipment downtime is expected to decrease from 10 minutes per month to 6 minutes per month, representing a 40% reduction. These projected outcomes highlight the effectiveness of our proposed solutions in enhancing operational efficiency. The accompanying chart illustrates these anticipated improvements in session start delays and equipment downtime."
