

I have one concern , We received a medication after the surgery , they prescribed as pain reliever , it's a tablet It's a 5-a-doll plus based on the information of the medication it`s for 12+ years and my son is 10years old , so I'm not sure if that is the proper medication , instruction tells that it`s a pain reliever every six hours as needed So since my son is not in pain, so we did not give it to him maybe it's worth to check if this medicine is appropriate for kids since it has some narcotics So I believe it's something worth to check if it should be administered or given to a patients below that age that is required in that medicine
