

Logistics is considered as the foremost aspect of supply-chain that is a foremost cause of toxic-waste and pollution. Advanced practices for eco-friendly-friendly-supply-chain-logistics could afford Salalah-transportation-companies with improved competency to run its processes. Approaches involved in green-supply-chain cover implementing principles that develops supplier behavior through shifting components of services, or products. Toxic-waste and pollution causes worldwide warming, as environmentalists confirmed that that supply-chain-logistics is the foremost cause of this influence. Rutaba, & Nelson, (2022), confirmed that environmental issues are becoming foremost phenomenon in businesses-today.
